| Heavy rainfall combined with a high Cache River stage flooded more than 2000 acres of soybeans in Woodruff County. The crops flooded were a total loss. When the gage on the Cache River near Cotton Plant exceeded 17 feet, cropland began to flood. The eventual crest was 18.40 feet on the 5th of the month, putting almost a foot and a half of water on the crops. One farmer reported a loss of about 1000 acres. Additional acres were lost from the river all the way across Arkansas Highway 33 near the Dixie community. | | | | |

| Water was over the roads from Charleston to Paris to Scranton. Water was also covering Arkansas Highway 22. | | | | |
| <p>High pressure approached the region from the Plains, and provided hot and mostly dry weather in the few days leading up to this event. Clusters of storms tended to form to the north of Arkansas around the high. Cool outflow from one of these clusters worked southward toward the Arkansas and Missouri border during the afternoon of the 10th. Storms tapered off in the northern half of Arkansas after midnight, but precipitation became widespread in the southwest.</p> | | | | |
